**TOWN AND COUNTRY PLANNING ACT 1990 (as amended)**

**PROPOSAL: Silverton Neighbourhood Plan**

Dear Sir/Madam,

Thank you for consulting us on the Silverton Neighbourhood Development Plan. This email forms the basis of our response.

Network Rail is a statutory undertaker responsible for maintaining and operating the country's railway infrastructure and associated estate. Network Rail owns, operates, maintains and develops the main rail network. This includes the railway tracks, stations, signalling systems, bridges, tunnels, level crossings and viaducts. The preparation of development plan policy is important in relation to the protection and enhancement of Network Rail's infrastructure.

As Network Rail is a publicly funded organisation with a regulated remit it would not be reasonable to require Network Rail to fund rail improvements necessitated by commercial development. It is therefore appropriate to require developer contributions to fund such improvements.

Level Crossings

**Any development of land which would result in a material increase or significant change in the character of traffic using rail crossings should be refused unless, in consultation with Network Rail, it can either be demonstrated that they safety will not be compromised, or where safety is compromised serious mitigation measures would be incorporated to prevent any increased safety risk as a requirement of any permission.**

There is one level crossings within the plan area that may be affected:

1. Silverton Footpath Crossing (MLN1 197m 10cns)

Network Rail has a strong policy to guide and improve its management of level crossings, which aims to; reduce risk at level crossings, reduce the number and types of level crossings, ensure level crossings are fit for purpose, ensure Network Rail works with users / stakeholders and supports enforcement initiatives. Without significant consultation with Network Rail and if proved as required, approved mitigation measures, Network Rail would be extremely concerned if any future development impacts on the safety and operation of any of the level crossings listed above. The safety of the operational railway and of those crossing it is of the highest importance to Network Rail.

Level crossings can be impacted in a variety of ways by planning proposals:

- By a proposal being directly next to a level crossing
- By the cumulative effect of development added over time
- By the type of crossing involved
- By the construction of large developments (commercial and residential) where road access to and from site includes a level crossing
- By developments that might impede pedestrians ability to hear approaching trains
- By proposals that may interfere with pedestrian and vehicle users' ability to see level crossing warning signs
- By any developments for schools, colleges or nurseries where minors in numbers may be using a level crossing
- By any development or enhancement of the public rights of way

It is Network Rail's and indeed the Office of Rail Regulation's (ORR) policy to reduce risk at level crossings not to increase risk as could be the case with an increase in usage at the level crossings in question. The Office of Rail Regulators, in their policy, hold Network Rail accountable under the Management of Health and Safety at Work Regulations 1999, and that risk control should, where practicable, be achieved through the elimination of level crossings in favour of bridges or diversions.

The Council have a statutory responsibility under planning legislation to consult the statutory rail undertaker where a proposal for development is likely to result in a material increase in the rail volume or a material change in the character of traffic using a level crossing over a railway:-

- (Schedule 4 (j) of the Town & Country Planning (Development Management Procedure) Order, 2015) requires that "...development which is likely to result in a material increase in the volume or a material change in the character of traffic using a level crossing over a railway" (public footpath, public or private road) the Planning Authority's Highway Engineer must submit details to both the Secretary of State for Transport and Network Rail for separate approval.

We trust these comments will be useful in the preparation of the forthcoming plan documents.

Yours Sincerely,

  
Town Planning Technician Wales and Western
